

Status of energy deposition studies at IR7

Collimation Meeting
20-03-2006

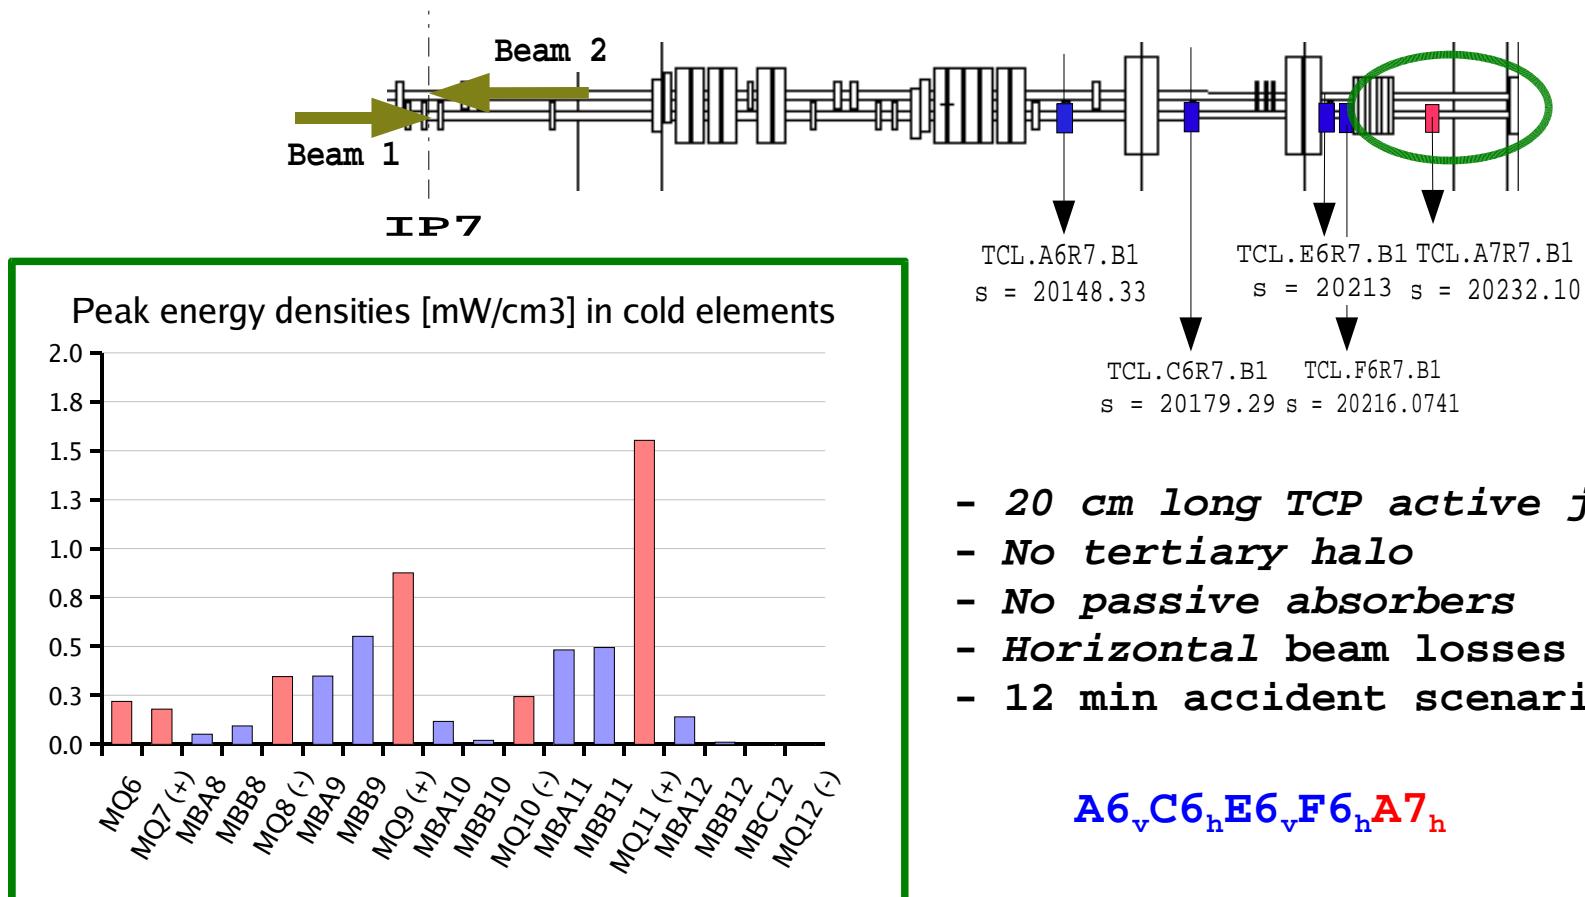

M. Santana, M. Magistris, A. Ferrari, V. Vlachoudis

Outline

- Summary of past activities & results
- Simulation of the cold arc under new conditions
 - Active absorbers on
 - Tertiary halo loss component
 - Case without secondary collimators
 - Vertical beam losses
 - Injection (pending)
- Simulations of doses in warm magnets, new conditions
 - Vertical beam losses
 - Dose in the pipes
 - Correction of position (pending)
- BLM's response
 - Cross-Talk
 - Individual detection spectra

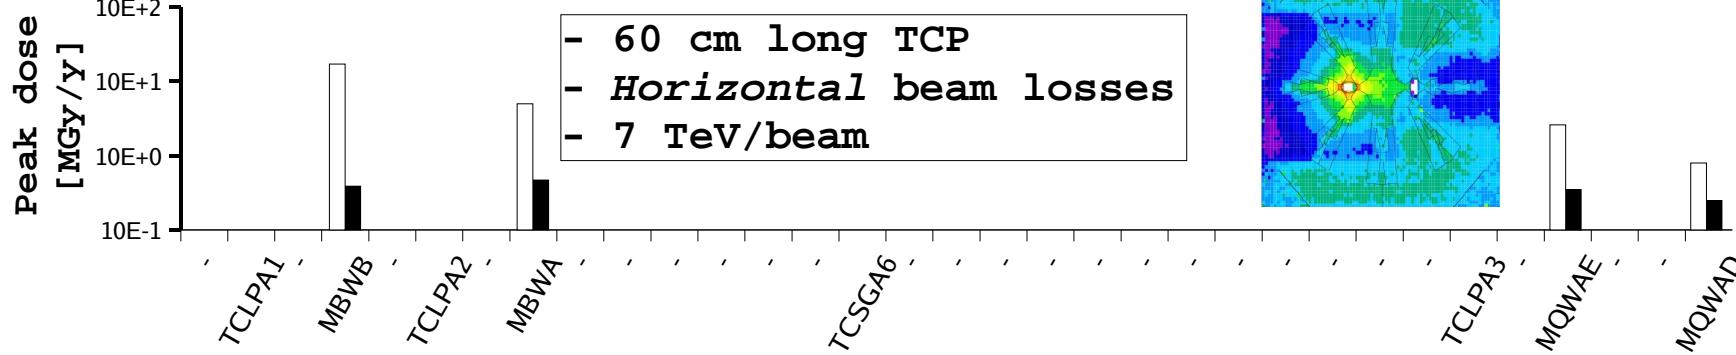

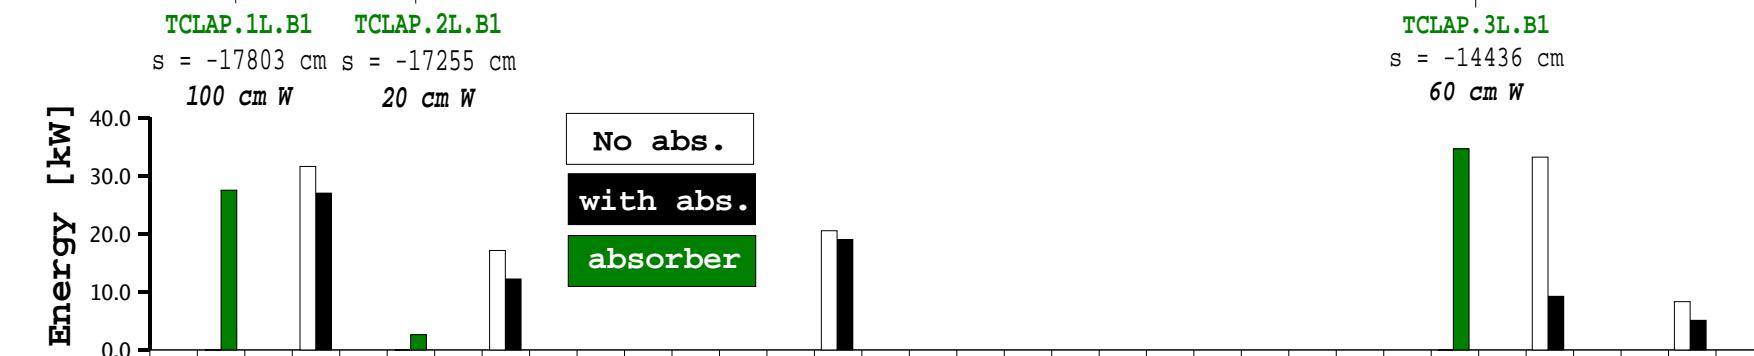

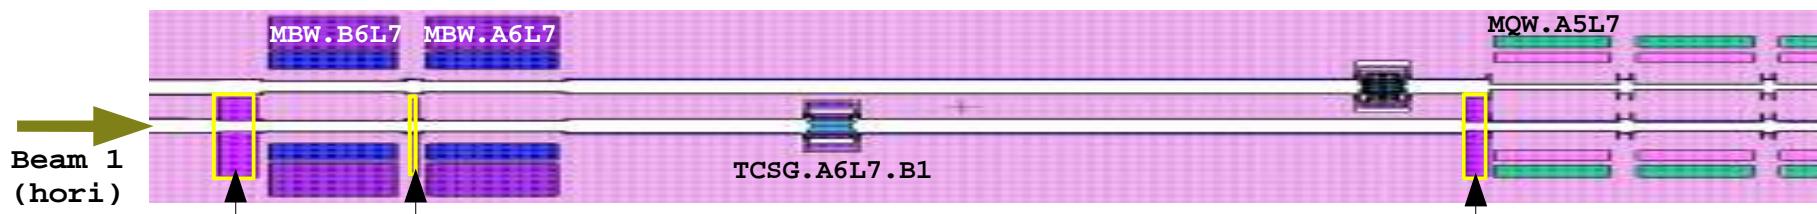

Summary of past activities 1/2

cold magnets: active absorbers

Summary of past activities 2/2

Warm magnets: passive absorbers

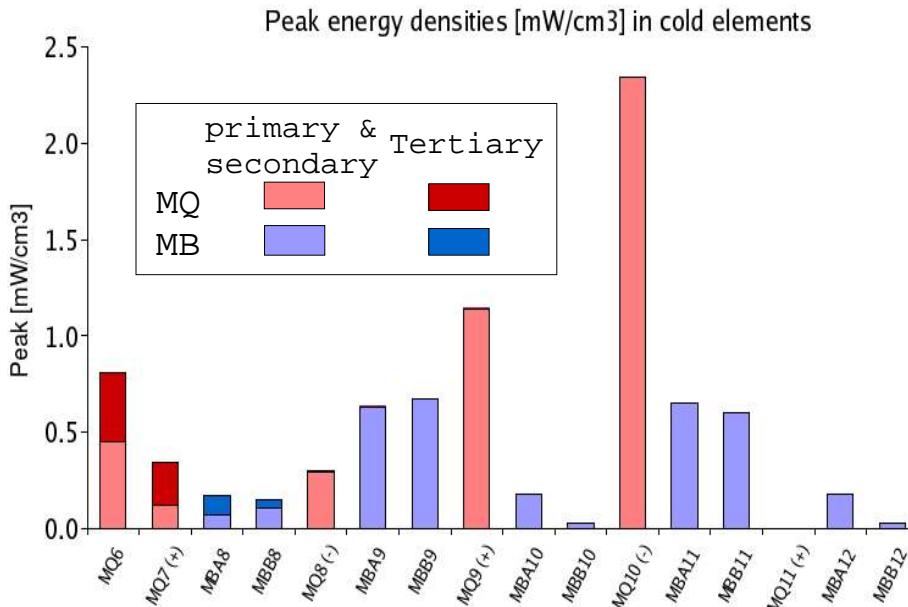

IP7

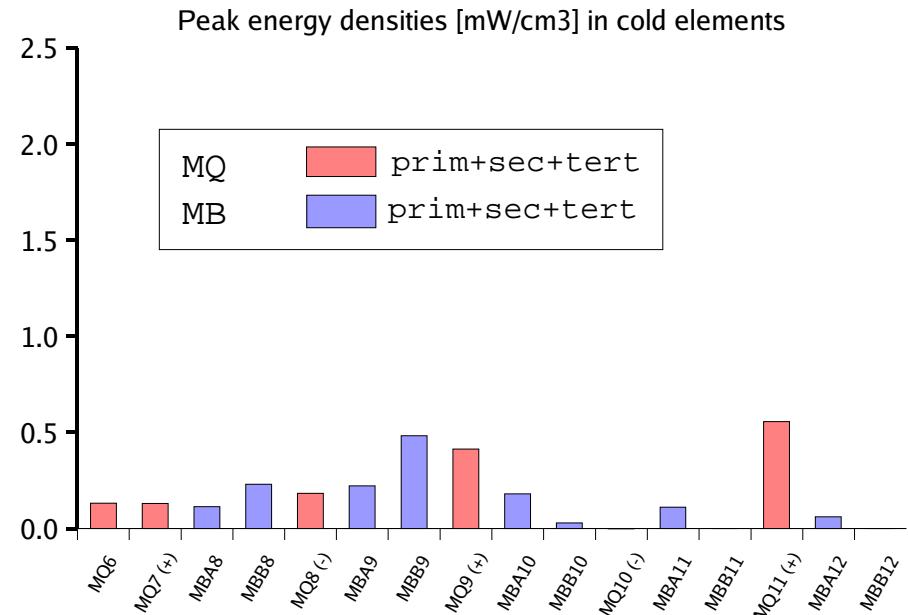

New simulation of the cold arc

Active absorbers + Tertiary halo + 60 cm TCP jaws + vert.

Horizontal losses

Vertical losses

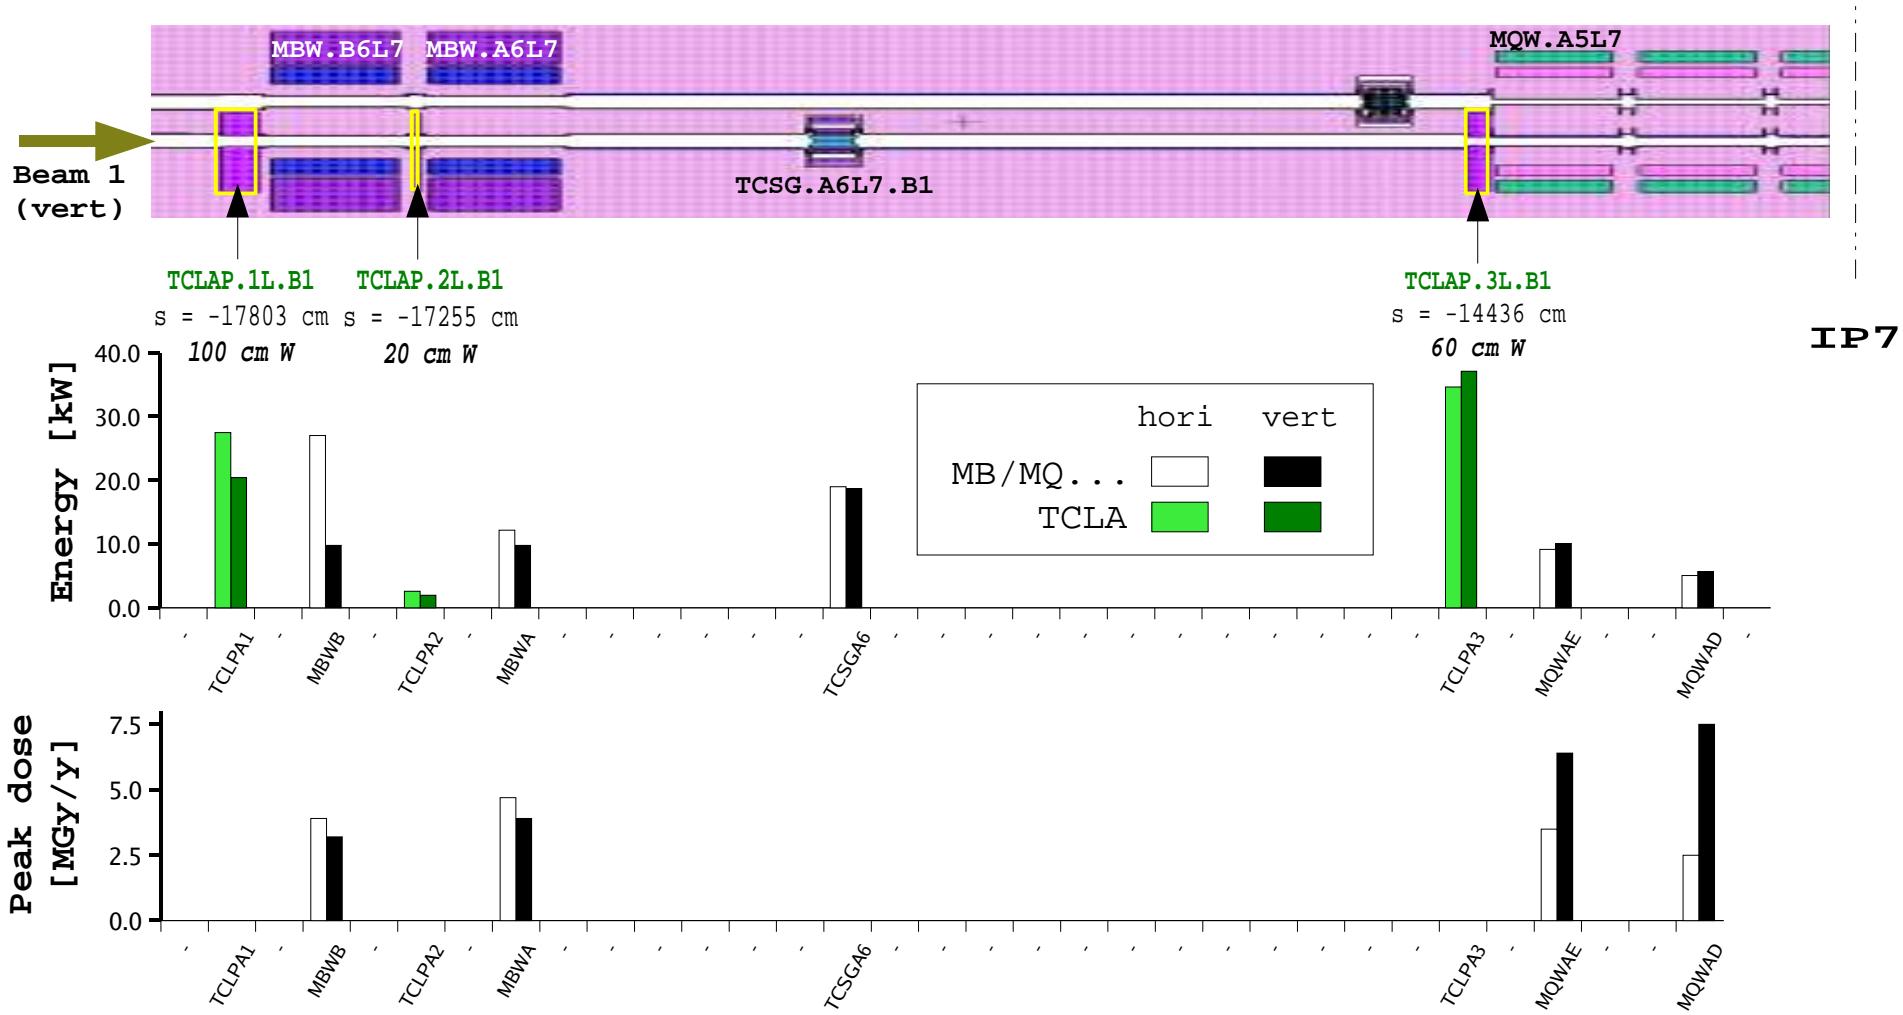

REMARKS:

- Hottest element MQ10
- Tertiary halo contributes 50% to the first elements
- Vertical losses less harmful
- Hottest element MQ11

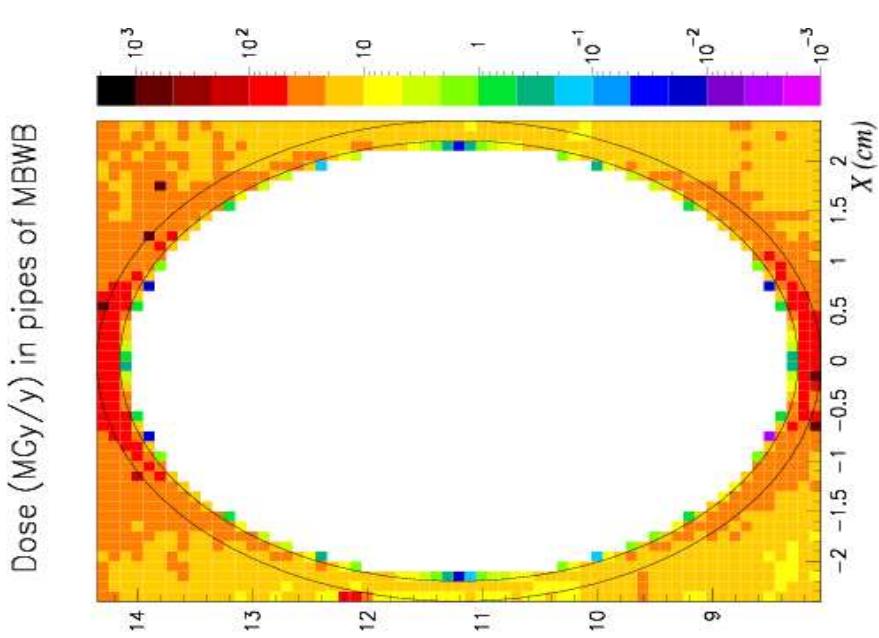

Pending: Injection

New simulation of the warm magnets

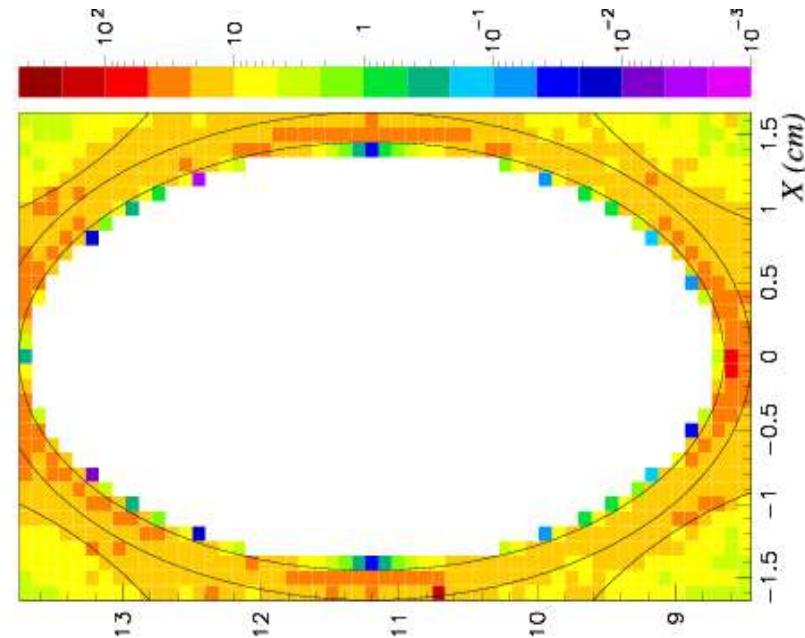

vertical vs. horizontal beam loss scenario

New simulation of the warm magnets dose in the pipes (horizontal loss scenario)

Dose (MGy/y) in pipes of MBWB

Dose (MGy/y) in pipes of MQWA

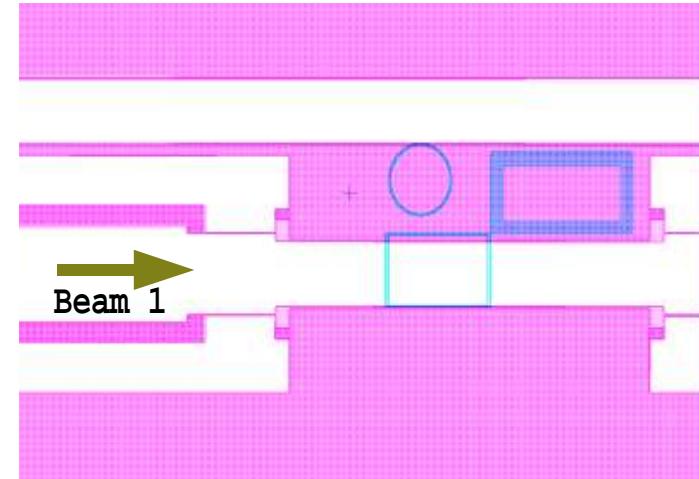

The heating film that wraps the pipes inside the MBW/MQW could be damaged...?

Simulation of Beam Loss monitors 1/3

Introduction

- BLM blocks **after each collimator** (TCP/TCS), **below** the beam line plane
- BLM twiss file created
- Each BLM contains **2 detectors**
- Each detector measures:
Fluence: protons, neutrons, photons, muons (+/-), e-e+, pions
Energy deposition
- Each measurement made for a different beam source (loss in collimators)

Simulation of Beam Loss monitors 2/3

Cross-talk Matrices (vertical detector), 7 TeV/beam

Horizontal beam loss scenario

	L1								R1

- Cross talk $\sim 1/d$
--> big cross-talk between primaries
- Little backscattering
- Similar picture for horizontal and vertical beam
- Similar cross-talk for the 2 detectors
- Loss estimation

$$L = (M^T M)^{-1} M^T R$$

Simulation of Beam Loss monitors 3/3

Predicted response of every BLM

- Detected particles
 - Protons
 - Neutrons
 - Muons (+/-)
 - Photons
 - Electrons/positrons
 - Pions (+/-)
- Loss scenarios (7TeV)
 - Horizontal
 - Vertical
 - Full losses
- 2 detectors/BLM
- Injection not analyzed

Future outlook

- Cold section: Injection
- Warm magnets:
 - Correct position
 - Heat load during injection
 - Vertical case...
- Reports
 - IR7-FLUKA techniques
 - Optimization of the active absorber scheme for the protection of the dispersor suppressor
 - Protection of warm elements at IR7, passive absorbers and collimators
 - FLUKA simulations for the optimization of beam loss monitors
